# PREP 3 PIPE BEVELLING 1" to 3"

RANGE: 28 - 76mm i/d / 1 - 3" i/d (optional from 20mm i/d / 0.8" i/d)

Functions: External bevelling / internal bevelling / elbow and

fittings bevelling / facing / counter-boring /

weld removal / J-prepping and facing of tube plate

Materials: Any kind of steel and exotic alloy

Power: Pneumatic, electric or battery

(110v or 220v)

The PREP 3 is a popular i/d locking, in-line feed end prep machines.

The PREP 3's power to weight ratio, in electric, battery (110v or 220v), or pneumatic drive form is unrivalled.

A 4-jaw tool holder (chuck) allows use of up to 4 insert or formed tools to enable bevelling of heavy wall pipe and tube. Simultaneous external, internal and facing of tubes can be performed with ease for accurate repetitive work. Its size, power, and functionality, makes it extremely popular in high volume boiler repair and maintenance work, tube facing, weld removal, and J-prepping of the tube plates and panels.

#### **FEATURES AND ADVANTAGES**

The PREP 3 is torque reactive. This means that the pipe or tube does not have to be fixed to be bevelled, making it particularly useful on-site, in maintenance and repair situations. This is due to the design and strength of the thru shaft system that locks to the bore of the pipe.

The jaw system itself consists of 3 equilateral positioned machined jaw segments, retained and locked on an inner, 'grooved' expansion shaft. These grooves keep the jaws held securely in position, unlike other systems that use a metal or rubber bands for jaw retention. As the expansion nut is tightened, the jaws expand, locking tightly, and square to the bore of the pipe.

The machine body is CNC machined out of solid aluminum and nickel plated. This ensures strength and leads to precise tolerances on all components, resulting in a stable heavy duty machine that does not move under load, we also ensure all components are treated utilising the latest technologies to ensure durability.
