# 2AAA eLED® PEN I

This PEN light does not need be left in a drawer or toolbox for use only as a close-up inspection light. The UK2AAA eLED PEN I boasts a 3-4 times leap in brightness and performance over traditional pen lights due to a state-of-the-art LED and electronic circuitry. The bright center weighted beam travels farther into the darkness and can actually replace many smaller flashlights. It only fades near the end of the battery life. A pushbutton thumb switch is nicely located for momentary or continuous lighting. For convenience the molded pocket clip is positioned near the head for easy pocket insertion. Lastly, it is OK to drop it, even in the water.
